

### **Title**

Payment does not validate field values ( name, expiration, cvc )

### **Priority**

Medium

I am making an assumption in this exercise that a third party payment system would verify these fields when handling a transaction and that this example would fail to be processed so a client is not charged.

Looks like a straightforward correction that someone can pick up when free.

I would still fix this issue before making a release, just prioritise other issues first.

### **Description**

Entering different values for cardholder name, expiry and cvc

There seems to be no validation because I can enter values with:

- wrong format
- invalid characters
- special characters

We should look at how we enforce formatting and black/white list characters

### **Cardholder name**

I can enter a value with special characters

|                 |
|-----------------|
| Cardholder name |
| Robert 123%&%^  |

### **Expiry and CVC**

Formatting described by the UI

|                |     |
|----------------|-----|
| Expiry (MM/YY) | CVC |
| 04/29          | 123 |

Values with incorrect formatting (reversed expiry and longer cvc)

|                |        |
|----------------|--------|
| Expiry (MM/YY) | CVC    |
| 29/04          | 123456 |

Values with letters instead of digits

|                |     |
|----------------|-----|
| Expiry (MM/YY) | CVC |
| ab/cd          | abc |

Values with special characters instead of digits

|                |        |
|----------------|--------|
| Expiry (MM/YY) | CVC    |
| \$@{ }         | { }@?. |
