

Title

Payment does not validate card number for special characters

Priority

Medium

I am making an assumption in this exercise that a third party payment system would verify these fields when handling a transaction and that this example would fail to be processed so a client is not charged.

Looks like a straightforward correction that someone can pick up when free.

I would still fix this issue before making a release, just prioritise other issues first.

Description

Current card number validation detects letters but it does not detect special characters

Card number: 1234 1234 abcd 1234

Your card was declined (invalid_number). Please check the details and try again.

Card number: 4242 4242 }:@ 4242

This card is successful
